340004 - SOAP-O7P40 - Sustainability Applied

Coordinating unit: 340 - EPSEVG - Vilanova i la Geltrú School of Engineering
Teaching unit: 729 - MF - Department of Fluid Mechanics
Academic year: 2015

Degree:
BACHELOR'S DEGREE IN INDUSTRIAL DESIGN AND PRODUCT DEVELOPMENT ENGINEERING (Syllabus 2009). (Teaching unit Optional)
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Optional)
BACHELOR'S DEGREE IN INFORMATICS ENGINEERING (Syllabus 2010). (Teaching unit Optional)
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Optional)
BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Optional)

ECTS credits: 6

Teaching languages: Catalan

Teaching staff
Coordinator: Jaume Miret i Tomàs
Others: Jaume Miret i Tomàs
          Jordi Segalàs i Coral

Prior skills
no

Requirements
no

Degree competences to which the subject contributes

Specific:
1. CE16. Basic knowledge and application of environmental technologies and sustainability.

Transversal:
02 SCS N2. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 2. Applying sustainability criteria and professional codes of conduct in the design and assessment of technological solutions.
02 SCS N3. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 3. Taking social, economic and environmental factors into account in the application of solutions. Undertaking projects that tie in with human development and sustainability.
05 TEQ N1. TEAMWORK - Level 1. Working in a team and making positive contributions once the aims and group and individual responsibilities have been defined. Reaching joint decisions on the strategy to be followed.
02 SCS. SUSTAINABILITY AND SOCIAL COMMITMENT. Being aware of and understanding the complexity of social and economic phenomena that characterize the welfare society. Having the ability to relate welfare to globalization and sustainability. Being able to make a balanced use of techniques, technology, the economy and sustainability.
Teaching methodology

The course is based on projects that students will develop along the course. However there will be theoretical sessions exposed by the teacher.

Large Group: During the 50% of the hours in large group the teacher will present the theoretical issues as a basis for addressing the projects.

Large group and small group: The rest of the time in large group and all small group sessions will be devoted to develop the project in groups of two people. At the end of the course the students will present the work to the class using a scientific poster format. Furthermore, a final dossier will be provided.

The following teaching methods will be used in the development of the course:

Lecture or conference (EXP): Sharing knowledge through lectures by professors or by external guest speakers.

Extensive project (PA): learning based in the design, planning and realisation in groups of a complex or extensive project or piece of work, applying and extending knowledge and writing a report on this approach and the results and conclusions

Evaluation Activities (EV)

Training activities:

The following training activities will be used in the development of the course:

Face-to-face

Theoretical classes and conferences (CTC): knowledge, understanding and synthesis of contents presented by the lecturer (professor) or by guest speakers.

Presentations (PS): class presentations of an activity carried out individually or in small groups.

Theoretical/practical work tutorials (TD): carry out in the class an activity or exercise, theoretical or practical in nature, individually or in small groups, with the advice of the professor.

Remote

Carry out an extensive project or piece of work (PA): design, plan and conduct individually or in groups, a complex or extensive project or piece of work, applying and extending knowledge and writing a report on this approach and the results and conclusions.

Autonomous study (EA): study or development of the subject individually or in groups, understanding, assimilating, analysing and synthesising knowledge.

Learning objectives of the subject

Get acquainted with sustainable value design and different existing approaches and strategies that focus on the environmental and social aspects of sustainable technologies.

At the end of this module, the student will:
340004 - SOAP-O7P40 - Sustainability Applied

- Getting insights in the presented approaches and how to apply them on an own technological project.
- To learn how to apply Design for Sustainability strategies, experience and evaluate their effectiveness.
- Think critically from the analysis, synthesis and evaluation of various alternatives.
- Be sensitive to social and environmental issues from concerns about the environmental impact of the solutions and understanding of the social problems.
- Understand language, understanding English as the language of work and media.
- Self-learning and long life learning.
- Understand the impact that the use of technology has on society that adopts it and the basic principles for a sustainable technology.
- Analyse the material and energy flows that occur in a system (industrial, architectural, urban) and their relationship with the land and resources that sustain it.
- Design, plan, implement and evaluate technology, scientific or management projects in the framework of sustainability.
- Understand the interrelationship of systems as material and energy flows to the environment.

</tbody>
</table>

**Description:**
This topic is related to the relation between energy and development, analyzing global and local energy use. How much conventional energy "is there" in the world? Environmental impacts of energy are analyzed, focusing on emissions of pollutants. Proposed solutions at technological and governmental level are evaluated. The concept of efficiency and the role that engineers and governments have in their implementation are analyzed. Renewable energies are evaluated. Can be the renewables the solution for a sustainable development?

**Description:**
The global use, the environmental and social issues related to mineral resources are evaluated. The use of water in the world is analyzed: in agriculture, industry and households with special mention of contamination. Waste management is evaluated in the first world from the point of view of their classification and responsibilities. The management of municipal and industrial waste in Catalonia is evaluated. Cleaner production concept is introduced with real examples.

### Qualification system

- EV1: Written test (PE). 0%
- EV2: Oral test (PO). 10%
- EV3: Individual or group coursework (TR). This includes results and reports and their oral presentation. 30%
- EV4: Class and laboratory attendance and participation (AP). 0%
- EV5: Performance and quality of group work (TG). 60%
